JOURNAL OF CRYSTAL GROWTH

Subject index

Alkali
– titanyl phosphate 223
Alloys
– of nickel–aluminium 353
Aluminum
– arsenide 1
– gallium nitride 133
Amino acids 281
Ammonium
– chloride 346
Apatite, synthetic
– magnesium in 304
Apparatus
– for solution growth
– – by electrodialysis
– – – of potassium dihydrogen phosphate 253
– for miscellaneous purposes
– – Bridgman method, graphite crucible for 65
L-arginine chloride 107
Asparagine 281

Barium
– borate 229
Benzidine 291
Biochemicals 281
Bismuth
– strontium calcium cuprate 48, 375
Boron
– nitride 97

Cadmium
– sulphide 141
– telluride 150
Calcium
– carbonate 311
– sulphate, hydrate 70
Cellular growth
– of nickel–aluminium alloy 353
– of organic alloys 335
Characterization
– by atomic force microscopy
– – of mercury(II) iodide 371
– by coincident elastic recoil detection analysis
– – of oxygen in silicon 173
– by high resolution X-ray diffraction
– – of superlattices 9
– by X-ray rocking curves
– – of strain relieved heterostructures 177
m-Chloronitrobenzene 297
Cholesterol 79
Computer simulation
– of Czochralski silicon 20
Constitutional supercooling
– of organic alloys 335
Convection 20, 193, 346
– micro 346
Copper
– gallium disulphide 236

Dendritic growth
– of ammonium chloride 346
– of iron disilicides 29
– of nickel aluminum alloy 353
Device characterization
– diodes 54
– lasers 54, 243
– optical amplifiers 243
– quantum wells 9, 157
Diamond 277
Diffusional control
– of solute 103
Diodes, see Device characterization

Epitaxy, see Thin film growth
Etching
– chemical 116, 267
Eutectic growth
– of organic binary systems 291

Gallium
– aluminum arsenide 1
– arsenide 126
– nitride 133
Gypsum 70

Hydrodynamics, see Convection

Impurity
– effect on step growth 107
Indium
– aluminum arsenide 121
– gallium arsenide 9

– nitride 15
– phosphide 9
Iron
– disilicides 29

Kinetics
– of crystallization 79
– of growth 29, 70, 79, 87, 107, 116, 277, 281, 297, 311, 335, 353
– of inclusion formation 150
– of interface control 9, 79, 277, 281
– of nucleation 79, 157, 229, 281

Lanthanum
– aluminum oxide 59
– chromium oxide 59
– cobalt oxide 59
Lasers, see Device characterization
Lasers, crystals for
– potassium dihydrogen phosphate 253
– silver gallium diselenide 65
– yttrium neodymium aluminum borate 187
Lead
– calcium sulphoselenide 54
– telluride 157
Lithium
– niobate 193, 201, 213
– potassium niobate 207
– triborate 218
Lovastatin 281

Melt growth technique
– by Bridgman–Stockbarger method
– – of silver gallium diselenide 65
– by Czochralski method
– – of lithium niobate 193
– – of silicon 20, 173
– – theory of 103
– by micro-pulling-down method
– – of lithium niobate 201
– – of lithium potassium niobate 207
– by traveling heater method
– – of cadmium telluride 150
– – of copper gallium disulphide 236
– by uniaxial solidification
– – of nickel aluminum alloy 353
– – of silicon 41
Mercury
– (II) iodide 371
Molybdenum
– oxide 320
Morphological stability
– of organic alloys 335

Nanocrystals
– of cadmium sulphide 141
Nickel
– aluminum alloy 353
– oxide 329
p-Nitrophenol 291
Nonlinear optics, crystals for
– alkali titanyl phosphate 223
– cadmium sulphide 141
– potassium dihydrogen phosphate 253
Nucleation
– of asparagine 281
– of barium borate polymorphs 229
– of cholesterol 79
– of lovastatin 281
Numbers
– Peclet 103
– Reynolds 103
– Schmidt 103

Perovskites 59
Phase diagrams
– of benzidine/p-nitrophenol 291
– of diamond 277
– of lithium oxide/boron oxide 218
– of nickel–aluminum alloy 353
– of potassium fluoride/gadolinium fluoride/water 243
Potassium
– dihydrogen phosphate 107, 253
– gadolinium fluoride 243
– lithium niobate 207

Quantum wells, see Device characterization

Ruthenium
– disulphide 91

Silicon 20, 41
– carbide 258, 267
– germanium 177
– heavily doped with antimony 173
Silver 329
– gallium diselenide 65
Sodium
– chlorate 87
Solid growth technique
– by polymorphic transformation
– – of barium borate 229
– – of boron nitride 97
Solution growth technique
– by flux method
– – of alkali titanyl phosphate 223
– – of lithium triborate 218
– – of ruthenium disulphide 91
– – of yttrium neodymium aluminum borate 187
– by hydrothermal growth
– – of potassium gadolinium fluoride 243
– by low temperature method
– – of amino acids 281
– – of apatite, synthetic, substituted with magnesium 304
– – of cholesterol 79
– – of gypsum 70
– – of potassium dihydrogen phosphate 253

– – of sodium chlorate 87
– – of strontium carbonate 311
– by sol–gel method
– – of cadmium sulphide, nanocrystals 141
Strain
– of heterostructures, silicon–germanium 177
Strontium
– carbonate 311
Superconductivity materials, high T_c
– whisker
– – of BSCCO 375
Superlattices, multilayers
– of silver/nickel oxide 329
– of III–V compounds 9
Surface energy, determination
– of biochemicals 281
Surface structure
– of mercury(II) iodide 371

Tantalum
– oxide 116
Thermochemical studies
– of organic binary eutectic systems 291
Thin film growth, epitaxy
– by atomic layer epitaxy
– – of tantalum oxide 116
– by chemical beam epitaxy
– – of gallium arsenide 126
– by hot wall epitaxy
– – of lead calcium sulphoselenide 54
– by liquid phase epitaxy
– – of lithium niobate 213
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide 9
– – of indium phosphide 9
– by molecular beam epitaxy
– – of indium aluminum arsenide 121
– – of lead telluride 157
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of aluminum arsenide 1
– – – of bismuth strontium calcium cuprate 48
– – – of diamond 277
– – – of gallium aluminum arsenide 1
– – – of indium nitride 15
– – – of lanthanum metal oxides, perovskites 59
– – – of silicon carbide 258
– – – of zinc selenide 367
– – – theory of 277
– – – thermodynamical aspects (of aluminum arsenide) 1
– – through evaporation and condensation
– – – of silver/nickel oxide superlattices 329
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium nitride 133
– – – of gallium nitride 133
– – – of iron disilicides 29

Vapor growth technique
– by chemical transport
– – of molybdenum oxide 320
– – of ruthenium pentoxide 91
– by evaporation and condensation
– – of silicon carbide 267

Whisker growth
– of bismuth strontium calcium cuprate 375

Yttrium
– neodymium aluminum borate 187

Zinc
– selenide 367
